
Civil Action No. 3:11-cv-00726-M -BH

PROOF OF ALTERATIVE SERVICE

John T. Childs

Pursuant to the Court's Order of February 1, 2012, relating to service of summons by E-mail:

I served the summons and copy of the Original Complaint at jtchilds@gmail.com Wed, 22 Feb 2012 17:18:38 GMT (11:18:38 AM CST) and at jchilds3@gmail.com Wed, 22 Feb 2012 17:18:38 GMT (11:18:38 AM CST) on John T. Childs, who is designated by the Court to accept service of process by Certified E-mail.

Specification of Authentication of Delivery and Proof-of-Service (ReadNotify.com, "RN") by Certified E-mail process:

Definitions of certificate and a signature:

A certificate is a group of facts, usually written in English.

A signature - or in this case - a digital signature - verifies that those facts have not been altered since they were made. Digital signatures also contain the date and time they were issued, and some way to identify who made the signature.

Meaning of ReadNotify digital certificates:

The digital certificates produced by ReadNotify.com inextricably link the date and time with additional facts, including one or more of the:

1) actual contents of an email, 2) header portion of an email, 3) delivery status of an email (a/k/a "DSN"), 4) the opening status of an email, 5) IP address(es) on which the email was opened, 6) apparent email address of the person opening the email, 7) attempt to identify domain name of the computer used to open the email on the email software used to open the email, computer operating system of the computer used to open the email, browser version, features, and identification information of the computer used to open the email, 8) potential indication by the reader of the email of their understanding of the email content

This means that anyone can verify a ReadNotify.com **digital signature to irrefutably determine** exactly when an email was sent, delivered, opened, and/or acknowledged.

All ReadNotify certificates are stamped with the date and time they were produced, together with a unique in-order serial number. All certificates are sent out to the sender and/or recipient, and additionally, the signature portions are published on our web site for anyone to read at any time. ReadNotify regularly produce an additional signature-of-signatures (that is - RN digitally signs a list of preceding signatures, and produce a certificate to prove those signatures exist at a certain point in time). These "signature digests", are published in various locations on the Internet, as well as also being digitally time-stamped by other time-verification services.

Ultimately, **every signature produced by ReadNotify is inextricably linked-in-time to every previous signature** (by virtue of the in-order serial number and the regular signature digests). The indelible digital "paper trail" created by the constant distribution and publication of serialized certificates and the publication of externally time-stamped signature-digests makes it impossible for any dates or times to be forged.

Attached hereto are true and correct rendered facsimiles of the Internet E-mail electronic Return Receipt and Digital Certificates authenticating the recipient's e-mail server posting, mail client receipt and opening of the message and delivery of the Summons and Complaint.

I declare under penalty of perjury that this information is true.

Date: Wednesday, February 22, 2012
